COVID-19 Rapid Test Kit
COVID-19 IgM/IgG RAPID TEST KIT

The test has been used widely by the Chinese CDC to combat infections and is now available globally. This test detects both early marker and late marker, IgM/IgG antibodies in human finger-prick (capillary) or venous whole blood, serum, and plasma samples.

It can be used for rapid screening of carriers of the virus that are symptomatic or asymptomatic. Recent studies suggest that a high percentage of patients show no clinical symptoms of the virus, thus screening patients is vitally important. The test is ideally suited for hospitals, clinics and test laboratories. The test can also be effectively deployed in businesses, schools, airports, seaports and train stations, etc., giving it the potential to become a compelling force in the fight against this global threat.

**NOTE:** Updated USFDA guidance issued on March 16, 2020, allows the distribution of this product for diagnostic use in laboratories or by healthcare workers at the point-of-care. The updated policy can be viewed by clicking [here](#). Please see FAQ’s below for more detailed information.

This product has CE-IVD registration.
How It Works

Steps
2. Add blood/serum/plasma sample to sample well.
3. Place 2-3 drops of buffer in sample well.
4. Read results after 10 minutes and no more than 15 minutes.

Results

- Negative
- IgM Positive
- IgG Positive
- IgM/IgG Positive
Clinical Samples Study Report
2019-nCoV IgG/IgM rapid test cassette
(Whole blood/Serum/Plasma)

Purpose
Evaluate the performance of Orient gene 2019-nCoV IgG/IgM rapid test cassette (Whole blood/Serum/Plasma) for testing clinical samples.

Materials
Orient gene device: 2019-nCoV IgG/IgM rapid test cassette (Whole Blood/Serum/Plasma)
Lot: 20200203, Exp: 01-2022

Clinical samples information
87 blood samples were collected from patients exhibiting pneumonia or respiratory symptoms.

Method
The Orient gene 2019-nCoV IgG/IgM rapid test has been evaluated with the 87 blood samples obtained from patients exhibiting pneumonia or respiratory symptoms. All samples have been tested in single with Orient gene device, the results were compared to RT-PCR or clinical diagnosis (including chest Computed Tomography and clinical signs etc.) of “Diagnosis and treatment of novel coronavirus pneumonia”.

Test procedure
Followed the package insert.

Results
Summary data of Orient gene 2019-nCoV IgG/IgM rapid test related to RT-PCR

30 out of 87 patients were in convalescence and all had positive IgG results.

Conclusion
The above results showed that:
The sensitivity of Orient gene 2019-nCoV IgM test is 84.9% (62/73) comparison to RT-PCR.
The sensitivity of Orient gene 2019-nCoV IgG test is 100% (30/30) in the convalescence patients.
14 samples were detected as negative by RT-PCR and Orient gene 2019-nCoV IgG/IgM rapid test.

Discussion:
If the test result is negative and clinical symptoms persist, additional testing using other clinical methods is recommended.

Like with all diagnostic tests, a confirmed diagnosis should only be made by a physician after all clinical and laboratory findings have been evaluated.

COVISURE™
COVID-19 IgM/IgG Rapid Test
(For in Vitro Diagnostic Use Only)

- COVID-19 Positive/Negative Results in 15 Minutes
- Works with Fingerstick, Whole Blood, Serum, or Plasma
- Increased Screening with IgM and IgG Antibody Detection
- Ideal High-Volume Screening Device to Compliment Nucleic Acid Tests

The human immune system is an incredibly effective defense mechanism in fighting and protecting the body against disease. When a patient is infected by the SARS-CoV-2 virus, the immune system will begin to form IgM antibodies as the first line of defense. While IgM antibodies are effective in the fight against infection, as the immune system mounts a more direct defense against the infection the body will begin to form specialized IgG antibodies. IgG antibodies are highly specific to the disease in question, they will appear in a later stage of the infection and remain in the body for some time after the infection has been defeated. The COVISURE COVID-19 IgM/IgG Rapid Test is designed to quickly detect and differentiate both the IgM and IgG antibodies produced by the immune system during a COVID-19 infection.

**Testing Procedure & Results**

**Finger Stick/Whole Blood Sampling Procedure**

1. Collect 20ul whole blood and add sample to the “sample well” on the test.
2. Place 2-3 drops of buffer into the “sample well.”
3. Wait 15 minutes.
4. Read results.

**Serum/Plasma Testing Procedure**

2. Add serum/plasma sample to “sample well.”
3. Place 2-3 drops of buffer in “sample well.”
4. Read results after 15 minutes.

Plasma Air Sterilizers
Product Overview

PLASMA AIR STERILIZERS

Cross Infection poses a significant risk factor associated with increased patient mortality

Hospital air contamination has been proven to contribute to patient comorbidity and eventually, mortality, while exposing medical staff to higher risk, ratcheting up medical costs and wasting valuable resources.

Application Range

Hospitals and Laboratory facilities, Private Health Clinics, Dental clinics, Beauty parlors, gyms and other indoor fitness centers, etc.
Working Flow

PURIFICATION & DISINFECTION MODULES

- **Primary Filter**
  Collect large particles in air such as hair, suspended matters, dusts, etc.

- **Middle Filter**
  Filter are made of 100% synthetic fibre to filtrate small dust and other suspending matters.

- **Plasma Module**
  Generate huge amount of active oxygen ions, high energy radicals that very easily to oxidize microorganisms, mold, spores, protein and nucleic acid of virus and kill all kind of microorganisms.

- **Spectrum Module**
  Generate UV of 240 - 280nm that kills airborne virus efficiently.

- **Polymer Filter**
  Remove and absorb smell, ammonia, TVOC, HCHO, etc.

- **HEPA**
  Removes 99% of 0.1μm and 0.3μm particles.

Note: configuration might be different according to actual room situations.
